

RAPID RUMEN DEVELOPMENT

Accelerated growth of the RUMEN with the **RALTEC MUSH PLAN** during the first 40 days of life.

Benefits of the RALTEC MUSH PLAN

1. A high level of antibody immunity can be achieved only if the animal is in the total rumination phase, which is achieved by applying the Raltec plan.
2. We deliver 60% less milk substitute.
3. Accelerated increase in Raltec ingestion.
4. Reduced diarrhoea and mortality.
5. Greater batch uniformity.

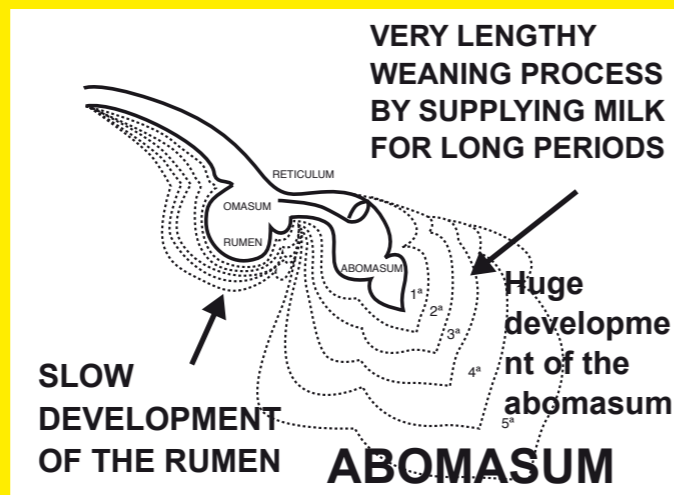

SLOW RUMEN DEVELOPMENT

Growth of the ABOMASUM by supplying **POWDERED MILK** for long periods, which does not offer **IMMUNITY**.

DISADVANTAGES OF THE TRADITIONAL SYSTEM

1. Customs the animal to be **MILK-DEPENDENT**, rather than a ruminant.
2. Later onset of the ruminant stage.
3. Increases the risk of illnesses and treatments.
4. Weaning is more difficult, increasing labour costs.
5. Antibody production is delayed by feeding with **ARTIFICIAL MILK**.
6. Mortality is often increased, on occasion leading to **HIGHLY STAGGERED GROUPS OF ANIMALS**.
7. Growth is arrested upon weaning, and takes several **DAYS TO RECOVER**.

WEANING WITH AUTOMATIC ROBOT APPLICATION AND HANDLING OF THE RALTEC PROGRAMME FOR WEANING OF LAMBS AND KIDS

"TERCAB FLOUR" MUSH LACTO-STARTER.

This is a highly appetite-inducing product. We recommend providing TERCAB Flour DRY mush from the 2nd to the 18th day of life. This mush STARTS both lambs and kids on the ingestion of small daily quantities. It is also easily digested, and so prevents diarrhoea.

- A. In the 1st week, give small quantities twice per day.
- B. Open the water between 5 or 6 days of life.
- C. Place the TERCAB in low-level feeders and ensure it is not trampled.
- D. The TERCAB product must always be consumed clean.
- E. From day 14 onwards, eliminate 1 milk feed in the afternoon (in pails).
- F. Provide only milk between 8 in the morning and 12 noon in the case of robot suckling.

"GRANULATED LACTO-PRE-STARTER" PRODUCT

Give from day 15 to day 50 of life. This is a highly appetite-inducing LACTO product which achieves higher rates of development and growth than other products on the market. For weaning at 21-23 days. WE RECOMMEND MIXING 50% of each of the two products from day 15 until day 25, for better adaptation (Mush + Pre-starter).

"RALTEC LAMB" PRODUCT FOR RESTOCKING OF LAMBS AND KIDS FOR WEANING AT 30-35 DAYS.

As a continuation of our plan, this product accelerates the growth of future Breeding Females, allowing them to be covered and so to give birth a month and a half earlier = MORE MILK. Give from 35 to 90 days of life. (Continue with Rastefütt CO-223 until 6 months of life.)

"OV-264 GRANULATED" NUTRITIONAL SUPPLEMENT FOR SHEEP AND GOATS.

This is a multi-functional product which serves to correct the main deficiencies which build up in intensively farmed animals for both meat and dairy production. Using this product the animals RECOVER PHYSIOLOGICAL INADEQUACIES suffered with each birth, stimulating and strengthening their organism for a LONGER productive life.

CONSUMPTION PER ANIMAL
RALTEC TERCAB 0,500 kg
8 kg
25 kg
Prevention: 50 g/day
Treatment: 100 g/day

We recommend using the REHIDRAMAX product for rehydration during the first 8 days. ALSO PROVIDE IN ACUTE CASES OF DIARRHOEA.

SHEEP-GOAT WEANING PROGRAMME USE FOR ROBOT OR PAIL WEANING PROCESSES FOR LAMBS AND KIDS

WEANING WITH AUTOMATIC ROBOT			
CORCAB MILK	DOSAGE: CORCAB STARTER MILK FOR LAMBS AND KIDS	WEEK 1: 1 LITRE PER DAY x 180 g, divided into 3 feeds per day. WEEK 2: 1 LITRE PER DAY x 170 g, in 2 feeds per day.	Approximate consumption 3,5 kg.
Give:			
MONTH 1	18 days dry flour mush	1° FLOUR MUSH FEED RALTEC TERCAB at discretion. Open water after 8 days	Give from the 2nd day of life to day 25 in the WEANING HOPPER (give twice per day; ensure it is clean to stimulate greater appetite).
MONTH 2		2° RALTEC LACTO-PRE-STARTER GRANULES ALSO GIVE STRAW AND WATER	Give from day 25 of life in the WEANING HOPPER, until day 60
MONTH 3		RALTEC FEED Give formula with the CO-223 core, 3%.	Mix from day 55 of life: CO-223 with Lacto-Pre-Starter for 5 days. From 55 to 90 days
			8 kg.
			60 kg.
WEANING WITH THE MOTHER			
MONTH 1	Give:	TERCAB DRY MUSH FEED	Deliver with the Special Weaning HOPPER
	20 days Dry Flour Mush	Feed TERCAB mush at discretion. Open water after 8 days.	From day 2 of life, until day 20. Give small quantities 2-3 times per day.
			0,500 kg.
MONTH 2		LAMB FEED Granular Pre-Starter	From day 20 until day 60.
			15 kg.
MONTH 3		Formula Feed CO-223 Core	From day 60 until day 90.
			38 kg.
